Vistacom specializes in custom solutions of all sizes, geared to meet your requirements in a cost competitive and efficient manner.

Vistacom Small System Solutions (VS3) offer a competitive advantage while still providing the communication and collaborative power you need to succeed. If you are looking for a simple, scaled down audio or video solution or collaboration room, there is a VS3 for your organization.

Helping deliver world-class products and service to our valued partners is the first priority of our experienced sales, support, and technical staff. The key benefit of the VS3 process is that we provide a single source, single responsibility solution. Every VS3 originating from our certified team members is centered around our partner's greatest need and the reason they are considering technology in the first place--to help communicate their message and meaning to their audience in the most cost effective manner possible.

Vistacom is an authorized representative of more than 300 manufacturer product lines. Our large range of technology choices provide our partners with the assurance that their organization will be receiving the very latest in audiovisual innovation and reliability. On a nearly weekly basis, Vistacom receives authorized, in-house product training from our U.S. suppliers, allowing our engineers to be fully prepared to design and deliver a VS3 tailored to best fit your specific need and application. We offer competitive pricing due to volume discounts as well as warranty benefits through our authorized dealer status.

From data projectors to video displays to high definition solutions--we have the VS3 for you.
