VISTACOM
AUDIO VIDEO SOLUTIONS

Healthcare technology is networked, connected, and becoming increasingly mobile. This increased connectivity allows patients to take a more active role in their healthcare. Always on the forefront of innovation, Vistacom integrates a wide range of capabilities, resulting in humanized solutions, improved patient outcomes, and streamlined communications for healthcare providers.

Quick Access to Critical Information

Today's healthcare professionals rely on a wide variety of methods to gain quick access to more information than ever before. With this in mind, Vistacom utilizes IT-based technology for the distribution of highly specific information, and specializes in streaming systems to mobile devices such as Android and iOS, providing both staff and patients with critical real-time information.

At the forefront of systems which improve physician efficiency, we've developed workstations on wheels (WOWs) designed for an array of care specialties. Going beyond the exam room, we've personalized the hospital suite, utilizing interactive touch capabilities to give bedside access to family members who cannot physically be at the hospital.

Our experience—and expertise—lies in helping medical personnel provide a better-planned AV infrastructure that integrates communication and scheduling technologies with today's highest-quality care.

Site Analysis

Before any work is begun, a thorough site analysis ensures that project scope is precisely defined to all client expectations.

Design/Build

Vistacom creates detailed models of all system components and their spatial surroundings—the blueprints for completed installations.

Custom Programming

Clear, concise system interfaces make our communication systems easy to use, even by nontechnical personnel.

AV/IT Integration

Vistacom creates AV/IT solutions that suit your unique needs. We focus on the quality management and performance of these solutions, and ensure that all required physical, network, and process security measures are HIPAA-compliant. Customized end-to-end AV/IT solutions include:

- ▼ Presentation spaces
- ▼ Telehealth solutions
- ▼ Simulation labs
- ▼ Remote clinical services
- ▼ Grand rounds
- ▼ Digital signage systems
- ▼ Video capturing and streaming
- ▼ Patient information displays
- ▼ Control rooms
- ▼ Remote patient monitoring
- ▼ Custom diagnostic carts
- ▼ Consultation/training/education spaces
- ▼ Mobile device integration
- ▼ Resource and asset management

Vistacom Remote Diagnostic Cart developed through collaboration with our healthcare partners.

Project Management

A dedicated project management team will closely monitor your entire installation. We will also ensure that essential facility areas remain operational during installation.

Training

Vistacom's specialized training programs go well beyond the "how to operate" and into the "why" and "when" of using your system equipment.

CONFERENCE CEN

SCHED

Telemedicine Systems:

Seamless information technologies deployment allows the efficient sharing of patient data, improving response times and driving effective patient therapy.

Patient Information Displays:

Empower your patients to understand their clinical courses and become an educated partner in their medical treatment.

Inventory Management:

Centralized resource and asset management deployments for life-cycle replacement of equipment and systems for the planning and budgeting of future technology growth.

Videoconferencing:

Full face-to-face connection for telemedicine, physician travel, remote staff, shared procedures, meeting management, and site-to-site participation.

Training and Education:

Technology-enabled education, consultation, and training spaces that provide the ability to work alongside college and university affiliations.

Vistacom Video Solutions:

Real-time capture of video and audio sources, synchronizing them for live streaming during grand rounds or surgical teaching.

Vistamed Remote ICU:

Instantly and automatically opens nurse/doctor communication links. Data from medical devices can also be viewed and analyzed remotely.

Vistamed Remote Diagnostic Cart:

Utilizes onboard battery power for true mobility, along with wireless connectivity, providing roaming capability throughout an entire facility.

CUSTOM SUPPORT SERVICES

As part of the positive, long-lasting partnerships we develop with our customers, Vistacom offers a variety of support services designed to increase equipment life while decreasing maintenance costs and downtime:

- ▼ **Standard Service**
On-call access to system service. Includes labor, unlimited two-hour phone response, 8 a.m. to 5 p.m. coverage, next-day onsite service, and help desk support.
- ▼ **Continuing Performance**
Includes scheduled maintenance visits designed to ensure that your equipment continues to perform to its fullest potential, maximizing the longevity of your system.
- ▼ **Continuing Education**
Ongoing training allows your staff to develop the knowledge and skills needed to effectively operate your technology. Certified trainers ensure system mastery.
- ▼ **Custom Service Level Agreements**
An extensive list of services to support a customized solution for your equipment needs.

What Vistacom does best is harness the world's newest technological advancements into real-world solutions that enhance your organization's capabilities while reducing overall operational costs. For more information on what we can do for your facility, visit VistacomInc.com/Healthcare.
